

Performance data as
risk indicators:
CQC's Quality and Risk Profile (QRP)

Part 2 and CQC – registration

2000/01 – 2004/05 NHS star ratings	2005/06 – 2009/10 NHS periodic review (‘annual health check’)	2010/11 – Registration, QRPs and ongoing monitoring of compliance
<ul style="list-style-type: none"> • Annual <u>retrospective</u> rating on the scale of 0 to 3 stars • Small number of key targets to be achieved • Predominantly <u>absolute</u> measures (i.e. set thresholds to achieve) • Rewards for 3 star trusts; ‘naming and shaming’ of 0 star trusts • By 2004/05, 72% of trusts were 2 or 3 stars 	<ul style="list-style-type: none"> • Annual <u>retrospective</u> rating on the scale of ‘poor’ to ‘excellent’ • Increased breadth and depth, mixing performance indicators and standards • Predominantly <u>absolute</u> measures (i.e. set thresholds to achieve) • ‘Naming and shaming’ of persistently poor or adequate trusts • By 2008/09, 63% of trusts were good or excellent 	<ul style="list-style-type: none"> • <u>Ongoing, evolving</u> system of evidence and risk based assessment and inspection • <u>No limit</u> to breadth and depth, able to incorporate any data or information • Predominantly <u>relative</u> measures (i.e. comparative indicators of performance) • Updated monthly, and <u>shared</u> with trusts, commissioners and other stakeholders

Registration timeline

**April
2010**

**NHS provider trusts
(c.380 QRPs)**

**Oct
2010**

**Adult social care and independent healthcare providers
(c.25,000 QRPs)**

**April
2011**

**Primary dental services e.g. dental practices
(c.8,000 QRPs)**

**April
2012**

**Primary medical services e.g. GP practices
(c.9,000 QRPs)**

Regulations and outcomes

Health and Social Care Act 2008

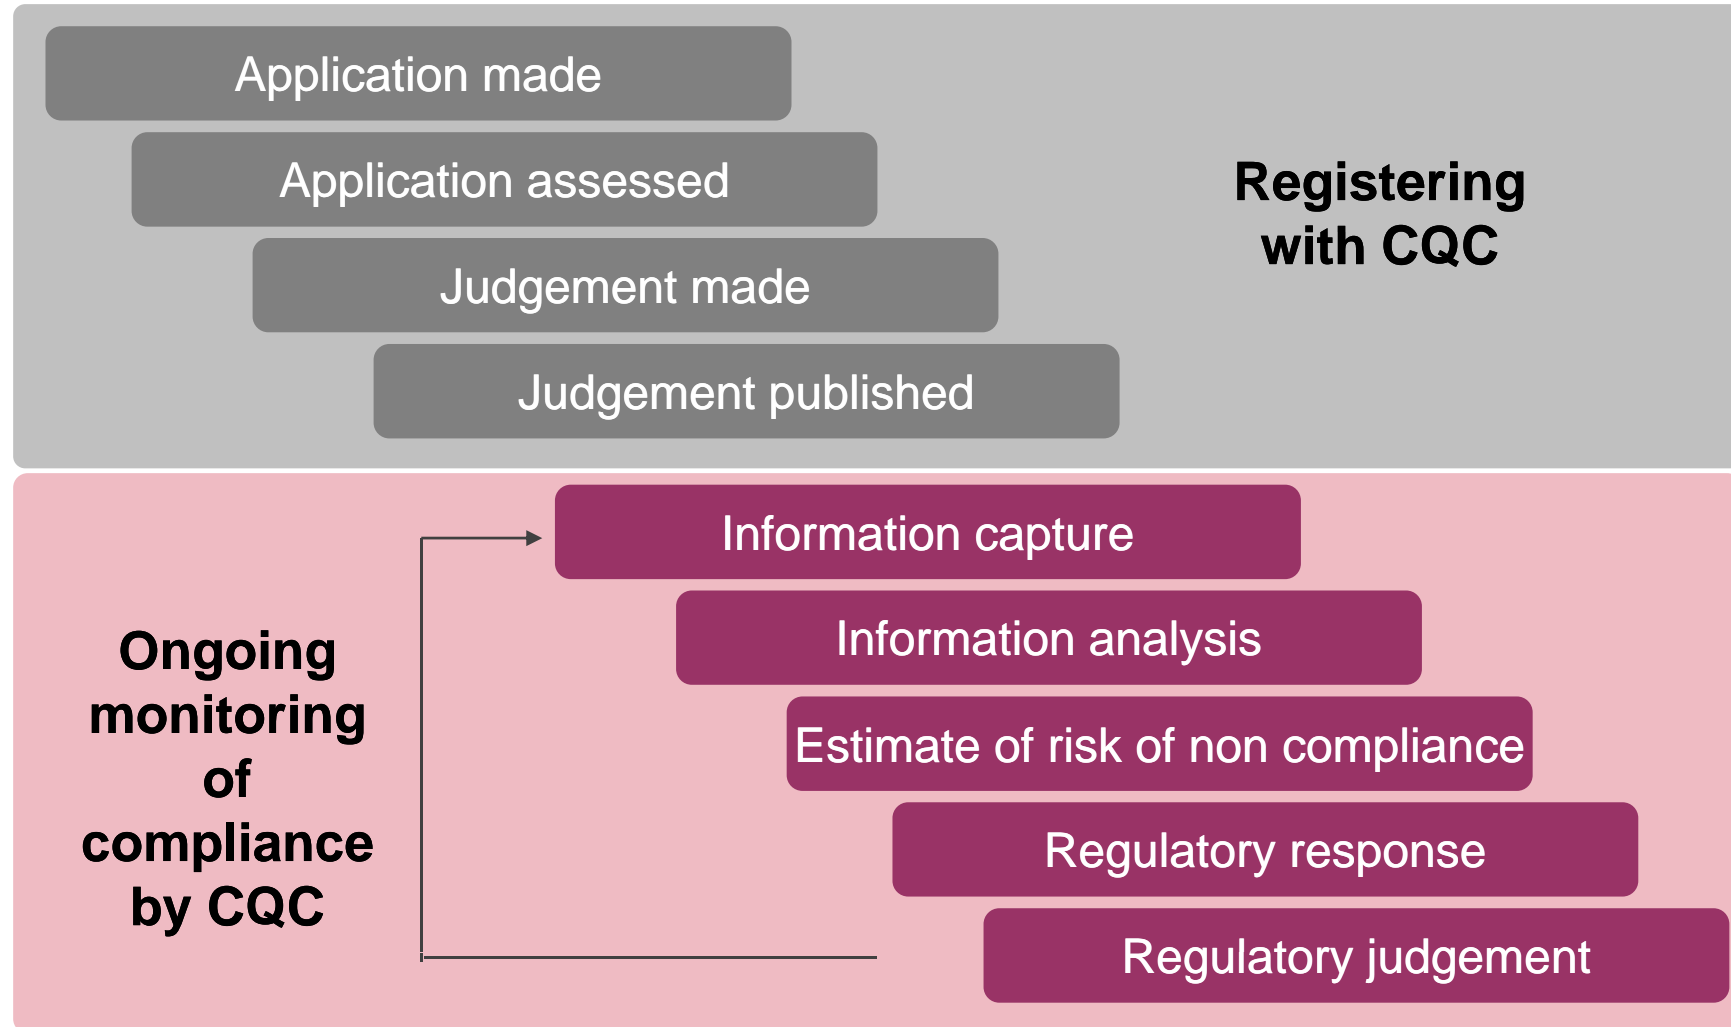

28 regulations

28 'outcomes'

16 outcomes related to quality and safety

1. Respecting & involving service users
2. Consent to care & treatment
4. Care & welfare of service users
5. Meeting nutritional needs
6. Co-operating with other providers
7. Safeguarding
8. Cleanliness & infection control
9. Management of medicines
10. Safety & suitability of premises
11. Safety & suitability of equipment
12. Requirements relating to workers
13. Staffing
14. Supporting staff
16. Assessing & monitoring quality
17. Complaints
21. Records

Registration process

Overview of QRPs

- Bring together information about a care provider so as to **estimate risk** and **prompt** front line regulatory activity
- Act as a **guide** and **aid** CQC's inspectors
- **Not a judgement** (or a rating, or a league table) in themselves
- **Build** over time (and are never 'perfect')
- Capable of using both **numeric** (quantitative) and **textual** (qualitative) data
- Essential **tool** to **support** monitoring of compliance
- **Help** inform subsequent judgements and add to the **knowledge base** about a care provider

How it works

Takes available data, qualitative and quantitative, and aligns these to the 16 essential standards

Uses a range of analytic techniques to produce z scores on the data – these are categorised and presented

Weights these according to data quality, relevance to the standard and relevance to patient experience

Aggregates the weighted data to allow for colinearity and overdispersion and categorises these into a “dial point”

QRP risk estimates

10 possible dial positions:

Some data is available, but it is not sufficient to calculate a risk estimate.

There is no data available to inform this outcome / section.

Key of data items

Quantitative (numeric)
data items

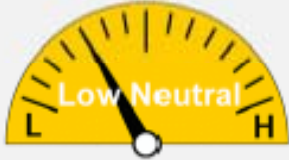

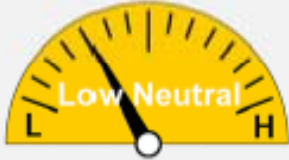

Risk estimate category	Description
Much worse than expected	The provider's result is statistically much worse than expected – roughly this equates to the provider being outside the 97.5% confidence interval
Worse than expected	The provider's result is statistically noticeably worse than expected – roughly this equates to the provider being outside the 95% confidence interval
Tending towards worse than expected	The provider's result is somewhat worse than expectation, but not at a level that would mean the observation is notable on its own. However, a pattern of items appearing in this category will increase our estimate of the likelihood of undeclared non-compliance
Similar to expected	The provider's result is broadly in line with expectation
Tending towards better than expected	The provider's result is somewhat better than the expected level
Better than expected	The provider's result is statistically noticeably better than expectation – roughly this equates to the provider being outside the 95% confidence interval
Much better than expected	The provider's result is statistically much better than expected – roughly this equates to the provider being outside the 97.5% confidence interval

Comment

Liked - My son was an emergency admission to ward 10, with appendicitis. Positively I can say that the standard of cleanliness was outstanding, and the care and dedication of the night staff and his named nurse was excellent. However I find it difficult to acknowledge as an RGN that the medical staff showed more compassion and empathy than the nurses. Frequently my son's and my request for analgesics were ignored and I felt I was seen as an annoyance as opposed to a concerned parent. - Disliked - Communication with parents and patients within other trusts they have "being with patients" training days, this is to improve empathy and care standards, I feel the nursing sisters and staff should attend! - Advice - I would like to thank his nurse, as his care for my son was excellent, and also the consultant in a & e.

Quality and Risk Profile (QRP)

The Care Quality Commission's quality and risk profiles (QRPs) bring together information about a care provider and provide an estimate of risk of non compliance against each of the 16 essential standards of quality and safety.

They are primarily intended as a tool to support the day to day work of CQC's inspectors. Clicking the boxes below provides more detail concerning that aspect of the QRP.

Latest Risk Estimates

The Care Quality Commission's quality and risk profiles (QRPs) bring together information about a care provider and provide an estimate of risk of non compliance against each of the 16 essential standards of quality and safety.

They are primarily intended as a tool to support the day to day work of CQC's inspectors. The table below lists the two most recent risk estimates for each of the 16 standards.

Section Outcome Name

Section1 - Involvement and information

Outcome Name	Previous Risk Estimate	Latest Risk Estimate	Latest Data Summary
Outcome 1 (R17) Respecting and involving people who use services			Total number of data items = 75 Number of qualitative data items = 5 Number of quantitative data items = 70
Outcome 2 (R18) Consent to care and treatment			Total number of data items = 0 Number of qualitative data items = 0 Number of quantitative data items = 0

Section2 - Personalised care

Outcome Name	Previous Risk Estimate	Latest Risk Estimate	Latest Data Summary
Outcome 4 (R9) Care and welfare of people who use services			Total number of data items = 128 Number of qualitative data items = 38 Number of quantitative data items = 90
Outcome 5 (R14) Meeting nutritional needs			Total number of data items = 9 Number of qualitative data items = 1 Number of quantitative data items = 8
Outcome 6 (R24) Cooperating with other providers			Total number of data items = 9 Number of qualitative data items = 4 Number of quantitative data items = 5

Additional Information

Item	8044
Description	The Trust has appropriate procedures for recognising and responding to patient requests for access to their health records. -
Rationale	Information governance covers areas such as the Confidentiality NHS Code of Practice, Data Protection Act 1998, Freedom of Information Act 2000, information security and quality, and records management. The Information Governance Toolkit has been made available to assist organisations achieve the four fundamental aims of Information Governance: a. To support the provision of high quality care by promoting the effective and appropriate use of information. b. To encourage responsible staff to work closely together, preventing duplication of effort and enabling more efficient use of resources. c. To develop support arrangements and provide staff with appropriate tools and support to enable them to discharge their responsibilities to consistently high standards. d. To enable organisations to understand their own performance and manage improvement in a systematic and effective way
Data Source	Department of Health, Information Governance Toolkit
Time Period	01-APR-09 to 31-MAR-10
Notes	For the requirements to achieve the Information Governance Toolkit Level for this measure please see https://www.igt.connectingforhealth.nhs.uk . Levels are range between 0 to 3, where achieving level 3 is the maximum level attainable.
Data Type	Categorical
Value	Level 3
Expected Value	
Sentinel Distribution	High values are worse
Expectation Set By	National

Contextual Risk

This section provides risk attributable to an organisation not by its performance but by its inherent and situational nature, the population it serves and the completeness of the information we hold for these three areas. Further details can be obtained by selecting the specific risk type below.

Organisations are not evaluated on their contextual risk estimates, rather they are intended to provide information to support the understanding of the outcome and section level risk estimates.

Inherent Risk	The risk attributable to the care provider by virtue of its organisational context	Green
Situational Risk	The risk attributable to the care provider by virtue of its organisational context	Neutral
Population Risk	Features in the local population that have been shown to affect care outcomes or access to care	Green
Uncertainty Risk	Assessment of the completeness of population, situational and inherent risk	N/A

Inherent Risk

The items below indicate how likely it is a trust will be risky due to its inherent attributes. The description and rationales for each item is shown along with the risk posed by each activity.

Inherent Risk	Green	Likely to be risky	Somewhat likely to be risky	Unlikely to be risky	Not Applicable
		3	2	12	1

Item ID	Description	Data Source	Rationale	Time Period	Value
IRADM001	An organisation's ratio of elective to nonelective admissions. This indicator separates out specialist from non-specialist acute hospitals.	Hospital Episode Statistics (HES)	Elective procedures have been shown to be less risky than nonelective ones as elective patients are more likely to be in better condition when admitted, be treated by a more experienced physician and have higher long term survival rates.	01/10/2009 - 30/09/2010	Likely to be risky
IRHRP001	The number of children's (0-17) admissions as a proportion of total admissions. This indicator is a member of the "high risk patients" suite of indicators and should be considered in conjunction with IRHRP001-IRHRP003.	Hospital Episode Statistics (HES)	Hospitals without dedicated paediatric facilities should only admit children as day cases or one night surgical care. Children under three years of age must only be accepted in an inpatient or outpatient unit with full paediatric nursing and medical staff	01/10/2009 - 30/09/2010	Unlikely to be risky
IRHRP002	The number of admissions for trauma to head, thorax and abdomen as a proportion of total admissions. This indicator is a member of the "high risk patients" suite of indicators and should be considered in conjunction with IRHRP001-IRHRP003.	Hospital Episode Statistics (HES)	Trauma injuries are one of the leading causes of death and secondary morbidity in western societies. Additionally, these injuries are very difficult to diagnose, and often require prompt treatment, and thus patients with head, thorax or abdomen injuries are considered to be high risk.	01/10/2009 - 30/09/2010	Somewhat likely to be risky

Updating and sharing the QRPs

- QRPs are updated regularly - monthly or more often depending upon data feeds
- **Currently shared** with NHS providers in pdf format
 - shared with providers as they are updated – so that we are all working from the same data
 - NHS trusts have had access to their QRP since September 2010 via a .pdf. This has been made available to commissioners, other regulators and the Department of Health.
- To be shared via the web from **summer 2011**, as part of '**QRP on-line**' project.
- Aim is to make QRPs more **accessible** and **interactive**

Key messages

Two very different ways of using information and data

Culture and history can affect how a country uses data

It is crucial to communicate to the wider public on care
Content - Format - User Voice

It is crucial to work alongside providers to improve quality of care

The background of the slide is a dark, almost black, field filled with numerous glowing, multi-colored numbers (0-9) in various sizes and orientations. The numbers appear to be made of a thin, luminous line, giving them a 3D or particle-like appearance. The colors include red, yellow, green, blue, purple, and cyan. The overall effect is a vibrant, abstract pattern of light against a dark background.

Thank you

Any questions?
